# CONTENTS

**Special Issue**
First NIU Statistical Sciences Symposium

*Edited by Ibrahim A. Ahmad and Sudhir Gupta*

Volume 78, Numbers 1/2

| | | |
|---|---|---|
| Preface | | v |
| On ranking treatment effects in a general linear model | *N.K. Bansal and N. Misra* | 1 |
| On the joint distribution of component failures for monotone load-sharing systems | *J.D. Lynch* | 13 |
| Identification of the parameters of a trivariate normal vector by the distribution of the minimum | *M. Elnaggar and A. Mukherjea* | 23 |
| Distributions with known initial hazard rate functions | *M. Scarsini and M. Shaked* | 39 |
| On finding trend-free block designs | *W.-C. Lin and J. Stufken* | 57 |
| The state-space model of the HIV epidemic with variable infection in the homosexual populations | *W.-Y. Tan and Z. Xiang* | 71 |
| Hypotheses testing for means of dependent and heterogeneous normal random variables | *Y.S. Hsu, M.H. Metry and Y.L. Tong* | 89 |
| Strategies for using technologies in introductory statistics courses | *N.A. Weiss* | 101 |
| Analysis of orthogonal saturated designs | *D.T. Voss* | 111 |
| On small-area estimation under two-fold nested error regression models | *D.M. Stukel and J.N.K. Rao* | 131 |
| Multistage design procedures for identifying two-factor interactions, when higher effects are negligible | *J.N. Srivastava and J.Y. Chu* | 149 |
| A stochastic process applied to sequential parametric analysis of censored survival data | *A. Maul, A.A. Bartolucci and K.P. Singh* | 191 |
| Designing the future: A simple algorithm for sequential design of a generalized linear model | *D.L. McLeish* | 205 |
| Optimal mixture designs for four components in two orthogonal blocks | *S. Ghosh and T. Liu* | 219 |
| On the property of posteriors for dispersion models | *C.W. Garvan and M. Ghosh* | 229 |
| Determining when the survival rates of two treatments are the same based on a censored data regression model | *J.P. Klein and M.-J. Zhang* | 243 |

*(contents continued)*

Bayesian analysis for masked system failure data using non-identical Weibull models *S. Basu, A.P. Basu and C. Mukhopadhyay* 255

A Bayesian comparison of cluster, strata, and random samples *M.J. Bayarri and B. Font* 277

Autoregressive model selection for multistep prediction *R.J. Bhansali* 295

Design of cross-over trials for pharmacokinetic studies *B. Jones, J. Wang, P. Jarvis and W. Byrom* 307

A Bayesian method for combining statistical tests *J.A. Koziol and H.C. Tuckwell* 317

Contagion distributions for defining disease clustering in time *G.A. Cline and R.J. Kryscio* 325

Biostatistics and clinical trials: a view *Y.J. Lee* 349

Incomplete block designs for slope ratio assays *A. Dey, K. Balasubramanian and S. Gupta* 369

A piecewise transition model for analyzing multistate life history data *P.-L. Chen and P.K. Sen* 385
